Fractions Mixtes et Impropres (A)

Pour chaque fraction mixte, trouvez la fraction impropre équivalente.

$4\frac{1}{2} = \frac{\quad}{\quad}$	$4\frac{1}{7} = \frac{\quad}{\quad}$	$4\frac{1}{2} = \frac{\quad}{\quad}$
$2\frac{2}{5} = \frac{\quad}{\quad}$	$2\frac{7}{10} = \frac{\quad}{\quad}$	$10\frac{1}{10} = \frac{\quad}{\quad}$
$6\frac{3}{5} = \frac{\quad}{\quad}$	$7\frac{2}{4} = \frac{\quad}{\quad}$	$10\frac{2}{9} = \frac{\quad}{\quad}$
$8\frac{6}{7} = \frac{\quad}{\quad}$	$6\frac{3}{10} = \frac{\quad}{\quad}$	$3\frac{3}{9} = \frac{\quad}{\quad}$
$1\frac{5}{7} = \frac{\quad}{\quad}$	$6\frac{4}{6} = \frac{\quad}{\quad}$	$6\frac{6}{8} = \frac{\quad}{\quad}$
$10\frac{5}{9} = \frac{\quad}{\quad}$	$1\frac{3}{8} = \frac{\quad}{\quad}$	$8\frac{1}{2} = \frac{\quad}{\quad}$
$8\frac{1}{2} = \frac{\quad}{\quad}$	$7\frac{4}{9} = \frac{\quad}{\quad}$	$8\frac{2}{4} = \frac{\quad}{\quad}$
$10\frac{3}{6} = \frac{\quad}{\quad}$	$4\frac{6}{9} = \frac{\quad}{\quad}$	$1\frac{4}{6} = \frac{\quad}{\quad}$
$4\frac{7}{10} = \frac{\quad}{\quad}$	$8\frac{2}{4} = \frac{\quad}{\quad}$	$8\frac{1}{3} = \frac{\quad}{\quad}$
$7\frac{1}{3} = \frac{\quad}{\quad}$	$2\frac{1}{2} = \frac{\quad}{\quad}$	$7\frac{1}{7} = \frac{\quad}{\quad}$
